PROFESSIONAL SUMMARY

Backend-focused Software Engineer with 3+ years of experience owning complex problems end-to-end in both enterprise and startup environments. Led security remediation across 5+ production applications, modernized and maintained a legacy Java codebase, leveraging automated testing and code quality tooling, and delivered a production MVP in 12 weeks as technical lead. Thrive in environments where I can take ownership, solve hard problems, and ship work that makes a difference.

EXPERIENCE

Technical Lead

Boone, NC

Mountain Dev

November 2025 - February 2026

- Led team of 3 developers across multiple time zones to deliver a production MVP in 12 weeks - a web application for visualizing aerial emissions inspection data, with data export functionality supporting KMZ, Excel, and PDF formats for client reporting.
- Collaborated with leadership on system design; implemented full stack using Python (FastAPI), Next.js, and PostgreSQL.
- Leveraged AI-assisted development tools (Cursor) to accelerate development and improve code quality.

Full-Stack Software Engineer

Boone, NC

ECR Software Corporation

January 2023 - October 2025

- Promoted twice in under three years, advancing from Junior to Expert based on technical ownership and consistent delivery. Received Rookie of the Year (2023) and two quarterly MVP awards.
- Eliminated 90% of critical and high severity vulnerabilities across 5+ applications by integrating NexusIQ scanning into CI/CD pipelines and remediating flagged dependencies through library upgrades and refactoring.
- Debugged and resolved critical production issues across distributed client environments, working closely with other teams to minimize downtime and prevent loss of revenue for retailers.
- Reduced technical debt by resolving 60% of bugs and high-priority code smells (measured via SonarQube); increased unit test coverage from 0% to 40% on legacy Java codebase using JUnit (300k+ LoC).
- Led end-to-end mobile app lifecycle as sole engineer for iOS and Android, reducing crash rates by 20% while serving 1,500+ regular users.
- Represented engineering at annual customer conferences, presenting roadmaps and translating client feedback into development priorities.

SKILLS, TOOLS, AND TECHNOLOGIES

Languages: Java, Python, SQL, TypeScript

Frameworks & Libraries: FastAPI, Next.js, Vue.js, React, GWT

Databases: PostgreSQL, SAP SQLAnywhere

Infrastructure & Cloud: Microservices, Apache Tomcat, Docker, AWS, REST APIs

Tools: Git, SonarQube, NexusIQ, Maven, Poetry, Android Studio, XCode

Practices: Agile/Scrum, CI/CD, Unit Testing, Code Reviews, System Design

EDUCATION

Appalachian State University

Boone, NC

Bachelor of Science in Computer Science

December 2022
